

## Product Change Notification

### Change epoxy resin fill color from grey to white (Series MMK, PFR, SMR and all PHE...)

<b>Identification</b>	<b>CCN-111110-ASB</b>
<b>Date</b>	<b>11 November, 2010</b>
<b>Affected Products</b>	Film capacitor series of the former Evox Rifa including MMK, PFR, SMR and all PHE...
<b>Change</b>	Change epoxy resin fill color from grey to white. There are no equipment or process changes. There is no functional difference, only color. Once mounted to the PCB the epoxy fill cannot be seen so the appearance of the capacitor on the PCB is identical.
<b>Justification and Benefits</b>	To harmonize the color with other products. The capacitors of the former Arcotronics and the newly-introduced KEMET film capacitors already use white color.
<b>Effective Date and Identification</b>	The change will begin at the factory on 1 Feb, 2011. This will be a running change without notice other than this PCN. The part number is not affected. It is possible that during the transition there will be shipments with some boxes or reels with grey epoxy and others with white.  Please contact the relevant Product Manager below if there is question.
